RESUME

Name (Korean)	카미스 압둘카림 알리	**Name (English)**	**KHAMIS ABDULKARIM ALI**
Location	Sokcho, South Korea	**Nationality**	Kenyan
Portfolio	abdulkarimali0001.github.io	**Email**	abdulkarimali0001@gmail.com github.com/abdulkarimali0001
Target Role	AI / Data Engineer for Semiconductor Manufacturing		

■ Education

Period	School	Major	Status	GPA
[Mon YYYY] – Aug 2027	Kyungdong University	Smart Computing	Expected	3.8 / [4.5]

■ Projects & Research

Project	Description	Tools
Wafer Map Defect Classifier	· Multi-label CNN for 8 defect types (38 mixed patterns) on 38,015 real-fab wafer maps; 0.991 macro-F1, 98.5% exact match on test · Verified model evidence with Grad-CAM; found and handled undocumented data values	PyTorch, Grad-CAM
Yield Prediction & Process Drift	· Predicted final-test failures from 590 fab sensors with SHAP sensor ranking; showed random splits overstate performance 2–3x and identified process drift (AUC 0.994)	XGBoost, SHAP
Model Optimization & API Deployment	· INT8 quantization and distillation: 14.6x smaller, 12x faster model, macro-F1 within 0.2 points · FastAPI inference service with pytest, Docker, and GitHub Actions CI (p50 ~10 ms)	ONNX, FastAPI, Docker
LLM Inference & Memory Bandwidth	· Benchmarked local LLM speed, memory, and KV cache by quantization and context length; Q4 gave 3.0x faster decoding at a constant 74–78 GB/s, showing decoding is memory-bandwidth-bound	Ollama, Python
Korean-English Semiconductor RAG	· Local RAG with citations over 1,398 Korean and English chunks using multilingual embeddings; on a 43-question reviewed test set, accuracy rose 63% to 72% (cross-lingual 47% to 76%)	Ollama, bge-m3
Korean LLM Hallucination Benchmark	· Built 70 Korean questions incl. false premises and scored 560 answers from 4 models (incl. EXAONE): 57–93% hallucination, cut 17.5 points by one prompt line; caught and fixed a faulty LLM judge	Ollama, Python
Legal Claim LLM Verification (Thesis)	· Python tool that checks LLM-generated legal claims against [sources]; [accuracy %] on [N] evaluated claims	Python, LLM

■ Skills

Programming	Python, SQL, C#
Data Analysis · ML	pandas, NumPy, scikit-learn (KNN, SVM), PyTorch (CNN), data preprocessing, model evaluation (accuracy, precision, recall, F1)
AI · LLM	RAG, multilingual embeddings, LLM evaluation (validating LLM judges), hallucination detection, local LLMs (Ollama), quantization
MLOps · Deployment	ONNX Runtime, INT8 quantization, FastAPI, Docker, GitHub Actions, pytest
Tools	Git, Jupyter, VS Code, Unity

■ Languages

Language	Level	Test / Score
Swahili	Native	-
English	Fluent	[TOEIC / IELTS score, if any]
Korean	Intermediate	[TOPIK level, if any]
Arabic	Beginner	-

I certify that the above information is true and correct.

Date: ____ / ____ / 2026
